

LA400-RCK EXTENSION CABLES

FOR THE LA400 MAGNETIC LOOP ANTENNA

This set of cables allows you to separate the control (tuning) box from the loop element, by up to 10m. Conveniently place the loop element as closely as possible to an open space, such as window, covered balcony, etc...away from local electrical noise, for a quieter reception experience. LA400 is NOT waterproof!

Cable set-up: Proceed as pictured below. Please note that the coaxial cable goes directly from the loop element to the antenna input socket of your receiver.

Refer to the LA400 manual on how to operate the antenna.

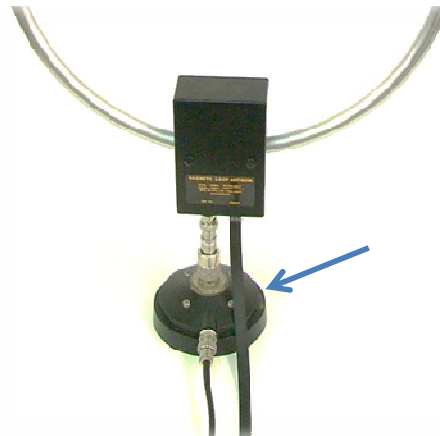

Setup examples :

On a window using a (non-supplied) plastic suction hook. Make sure that the hook is strong enough to carry the antenna and cable weight.

Using the (non-supplied) base of an antenna mobile mount.
